

# JOSEPH HARWOOD

## SENIOR AI PRODUCT ENGINEER

Amsterdam, Netherlands | +31 6 27 99 47 10 | joeharwood3@gmail.com | devjoe.io | weeknights.nl

Product engineer with 6+ years building customer-facing software, including Booking.com's first AI Trip Planner. Takes AI features from idea to production, combining React/Next.js with backend, database and payments delivery, and measures the impact.

## EXPERIENCE

---

### Founder & Product Engineer | Weeknights | Amsterdam Jan 2026–Present

- Built and launched a two-sided clubs and events marketplace, owning discovery, UX and full-stack delivery across Next.js, TypeScript and Supabase/PostgreSQL.
- Delivered customer and host journeys spanning event publishing, booking and ticketing; integrated Stripe Connect for host onboarding, payments and payouts, with 20 accounts enabled to accept charges.
- Grew organically to 830 registered accounts, 131 active club listings and 599 confirmed ticket places across 273 published events by September 2026.
- Used product analytics and user feedback to prioritise improvements; 82 of 320 confirmed buyers booked multiple events, while registrations grew the user base 59% in September.

### Independent AI Product Engineer | DevJoe | Amsterdam Nov 2025–Present

- Offer fixed-price AI prototypes and feature launches for startups and agencies, from scoping and UX through to production delivery on React, Next.js and the OpenAI API.

### Frontend Engineer II | Booking.com | Amsterdam May 2022–Nov 2025

- Built and launched Booking.com's first AI Trip Planner: a customer-facing conversational recommendation experience powered by the OpenAI API.
- Led frontend ideation and delivery for a neighbourhood-search experience that generated an estimated €19.7M in annual customer-equity value.
- Built configurable recommendation components and self-service tooling that reduced marketing launch time from two weeks to two days.

### Software Engineer | Appical | Amsterdam Nov 2021–May 2022

- Led the migration of flagship onboarding products from JSP to React and TypeScript, increasing feature-delivery speed by approximately 200%.
- Developed an OpenID Connect authentication flow and improved the security and reliability of JWT handling.

### Software Engineer Intern | IBM | London Jul 2019–Sep 2020

- Built a performance-review platform adopted by 5,000+ early-career employees across IBM UK.
- Modernised Netcool Operations Insight by migrating its WebGUI to React and adding comprehensive end-to-end and unit testing.

## SELECTED WORK

---

**RailGPT:** Conversational Dutch rail planner using OpenAI and the NS API, with natural-language journeys, live schedules and multi-city routes.

**Year in Travel:** Personalised, shareable Booking.com travel recap; won first place in Booking.com's internal hackathon.

**Queryhub.ai:** Open-source natural-language-to-SQL assistant with multi-database support, query optimisation suggestions and real-time execution.

## CAPABILITIES

---

**Frontend** React, Next.js, TypeScript, JavaScript, HTML/CSS, responsive UI, component architecture, Playwright

**Backend & platform** Node.js, Supabase/PostgreSQL, REST, GraphQL, Stripe Connect, OpenAI APIs, AWS, Docker, Kubernetes, Vercel

**Product** AI feature design, LLM integration, discovery, prototyping, UX, experimentation, analytics, 0-to-1 delivery

## EDUCATION

---

**BSc Software Engineering, First Class Honours | Manchester Metropolitan University**

**2021**
